

# N-Krypt Technology Overview

Providing the Next Generation  
in Business Communication

international corp.

You know the feeling: You send a critical email and worry it may end up in the wrong hands. Or wonder if it was ever received and read. Maybe you even called to find out. Your frustration may be trying to recall an errant message with sensitive information, or the inability to send that presentation deck because it's crept over 25MB. Regardless of the circumstance, your business communication deserves more. **Your business deserves the N-Krypt solution (powered by email2).**

N-Krypt enables your organization to create a **Private Email Network (PEN)**, a trusted channel for confidential conversation with colleagues, business partners, associates, and clients. Your PEN utilizes the same industry-trusted security technologies as Internet Banking to provide you with the confidentiality and control over your electronic communications. N-Krypt does not replace email servers, nor requires any downloads in the backend. You still continue to use your established email address and work seamlessly with your installed email programs.

## Features:

- Uses your existing email address & infrastructure
- Full Audit trail of all messages sent & received
- Real-time tracking of all messages & True Recall feature
- 2 Levels of security (128-bit SSL & 256-bit AES storage encryption)
- Control reply & forward options
- PEN is branded to your organization & logo
- Convenient SaaS Model, Easy-to-use, No downloads
- Integrated Video & Voice messaging
- Mega-File size delivery (250MB/message) allows you to substitute a portion of your monthly courier, faxing, and printing costs
- Compliant with all major regulations (SOX, HIPAA, GLB, PIPEDA, SB-1386, NRS-597.970, etc.)
- Universal Access - MS Outlook 2003/07, Web Client, iPhone, Blackberry, Windows Mobile, Symbian
- Key-word filtering, and Whitelist filtering

The N-Krypt solution (powered by email2) is so much more than just encryption. It's Security, Accountability, Confidentiality, Compliance, Privacy, and Convenience!

### The Delivery Slip

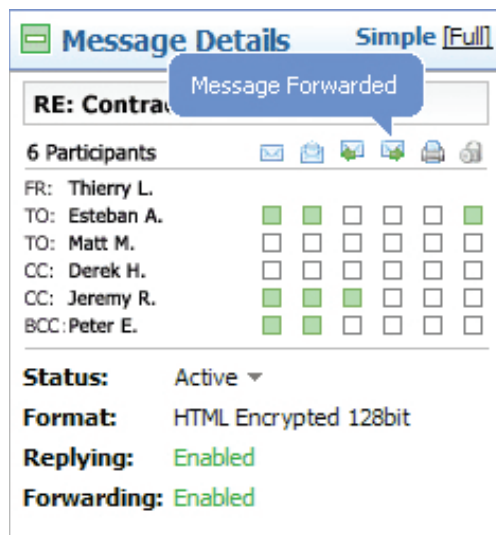

One of the trademark features of the N-Krypt solution is the delivery slip feature. The delivery slip gives a user the ability to easily track and monitor whether messages have been retrieved, reviewed, replied to, forwarded, printed, or deleted. A user also has the ability to recall a message at any time, without having to wait for permission from the recipient, or regardless if the message/attachment has been opened.

### Substitute Fax & Courier Costs:

With the combination of mega-file size attachments and real-time tracking, your business can benefit by becoming paperless, and begin to substitute a portion of your monthly faxing, courier, and printing costs. Utilizing N-Krypt for digital packaging ensures real-time delivery of your business communications through your standard email client. Eliminate the frustrations with time and money wasted relating to faxing and couriering.

### Securely Segment Your Business

N-Krypt enables you to securely segment your business based on your "Business Rules". PENs can be segmented by Dept., Function, Location, Client, Project, or Product. Imagine the ability to allow both internal and external stakeholders to securely communicate with a full audit trail and accountability. More important, the information that travels on your Corporate PEN belongs to the Corporation.

### The Power of Video

N-Krypt allows you to use the power of video messaging directly from your email client. The video & voice message is also securely transmitted to your recipients, giving you the opportunity to capture expression and emotion that would otherwise be timely or difficult to capture in a traditional email message. (webcam required.)
